

TagMatiks Flag Tag Series

Many times when we are doing item level tagging for items or surfaces close to metal or liquid or in situations where usual paper label gets obstructed by metal or liquid and on-metal tags are expensive, TagMatiks Flag Tags are an excellent choice.

Three Options for Flag Tags

TagMatiks Flag Tag (Flag Post Style - 0577)

Flat with Flag at the end (SKU : TAG-K-FG-577)

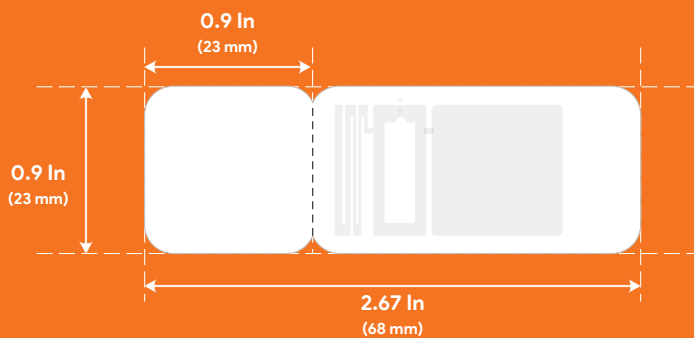

TagMatiks Flag Tag (Butterfly Style - 0298)

Flag with clear flaps (SKU : TAG-K-FG-298)

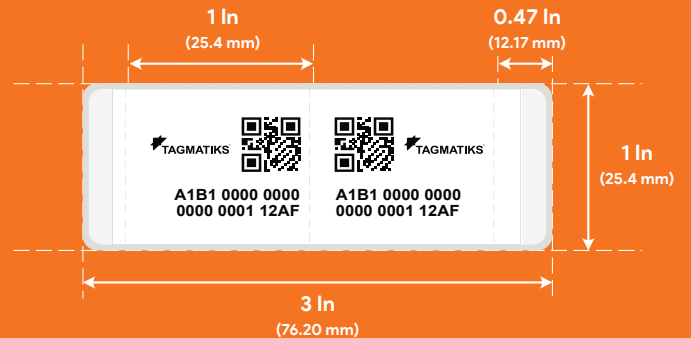

TagMatiks Flag Tag (Butterfly Style, PET face - 0298P)

Flag with clear flaps with PET coating (SKU : TAG-K-FG-298P)

Flag Post Style - 0577 (R6)

Butterfly Style - 0298 (H4) & Butterfly Style, PET face - 0298P (H4)

Both 0298 & 0298P are pretty simple to attach to items, simply remove the sticker cover from tag. Fold in half right in the middle between the two squared scan codes (white area) Attach both sides together close in the white region, do not stick the 2 clear side flaps together. & finally attach the clear flaps to clean flat surface, on the © flaps push down for pressure

It's available in two options, paper label or PET protected paper label. PET coated option is available with pre-printed and encoded option only. However this is a great option in industrial environments where you want protection against chemicals and abrasion with a coating of 1 mil clear PET layer on top.

The TagMatiks pre-printed and pre-encoded RFID labels are designed for users who are looking to jump start their RFID endeavors. However you can just choose to buy these thermal printers compatible paper tags for easy in-house printing. These labels can be printed/encoded on all leading RAIN RFID printers from Zebra, Printronix among others. We can also use these on plastic and cardboard surfaces and it will work as a standard tag.

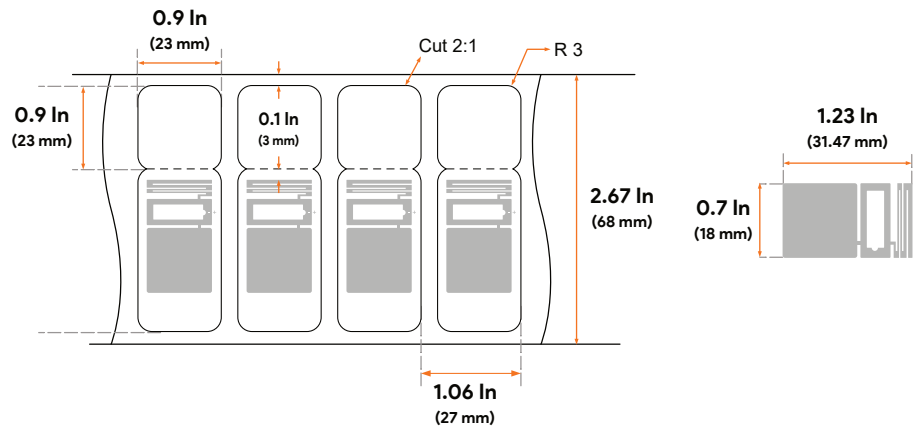

Where we can use these tags very effectively!

- Surgical Consumables
- Beverages
- Cans
- Chemical Containers
- Cosmetics
- Wherever you require tag sticking out like a flag.

TagMatiks Flag Tag (Flag Post Style - 0577 (R6))

Unwinding Direction →

IC Type - Impinj Monza R6-P
 Frequency - 860-960 MHz
 EPC Memory - 128bit max.
 User Memory - 64bit max.

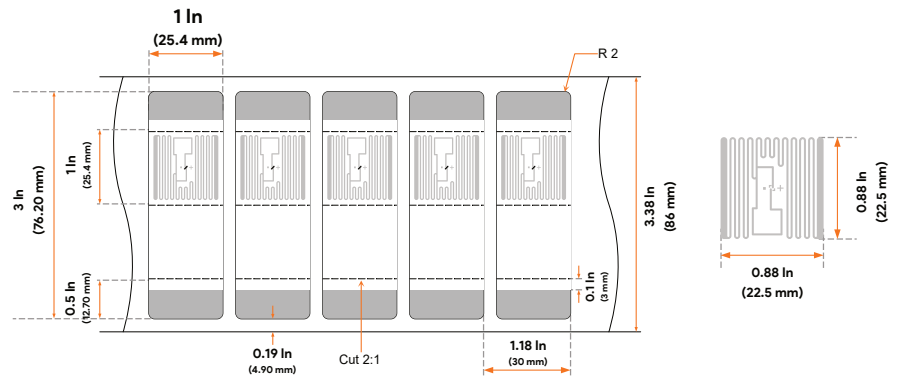

TagMatiks Flag Tag (Butterfly Style - 0298 (H4))

Unwinding Direction →

■ Transparent area

IC Type - Alien Higgs 4
 Frequency - 860-960 MHz
 EPC Memory - 128bit
 User Memory - 128bit

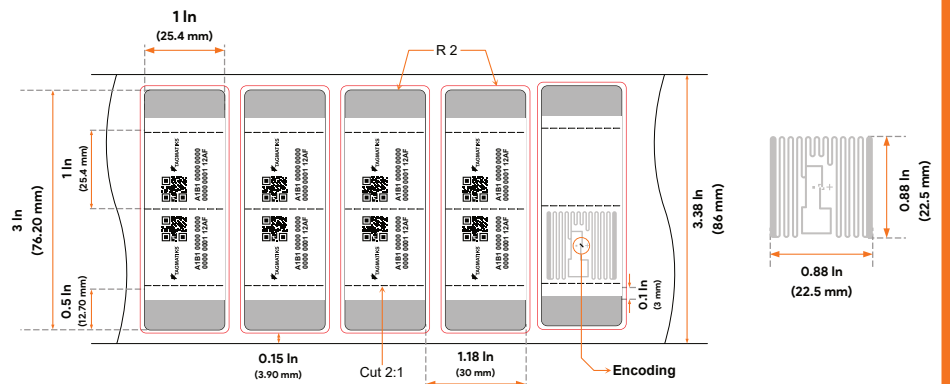

TagMatiks Flag Tag (Butterfly Style, PET face - 0298P (H4))

Unwinding Direction →

■ Transparent area □ Transparent PET with adhesive

IC Type - Alien Higgs 4
 Frequency - 860-960 MHz
 EPC Memory - 128bit
 User Memory - 128bit
